

MSKCC TRAIN: reference disagreement and capture variability

Diagnostic distributions — neither panel estimates the deployable model error floor

A. 248 unique reference triplets · 744 comparisons · 24 people

B. 966 images · 1421 same-site pairs 0 same-mode repeats · 0 cross-device pairs

NP / P = non-polarized / polarized; C / NC = contact / non-contact. NP-NC is clinical close-up.

All same-site images reuse one instrument triplet. Crop median is not a verified skin mask.
Quantile bars are not confidence intervals. Capture differences cannot be subtracted from model ΔE_{00} .
